

Installing the Point&Scroll mouse

We recommend installing the software before the hardware. The Point&Scroll mouse is compatible with any PowerMac or clone equipped with USB and running MacOS 8.6 or higher.

1. Insert the XLR8 Universal CD-ROM and open the Point&Scroll folder.

2. Double-click on the Point&Scroll mouse installer icon to launch the installation program. Click on "Install" to copy the files you need for the Point&Scroll mouse to your computer. After the installation is finished, restart your computer.

3. Unplug your original mouse, take the USB connector from the Point&Scroll and carefully insert the connector into the USB port on your Mac. If you are using a non-USB mouse, you will have to shut down your computer and disconnect the mouse while it is turned off.

Configuring the Point&Scroll Software

1. Launch the XLR8 Point&Scroll control panel in your Control Panels folder. From the "General" tab, you may configure both the left and right mouse buttons to perform several different functions.

2. From the "Scrolling" tab, you may configure vertical or horizontal defaults and continuous scrolling.

3. Once you have configured your mouse, close the control panel to save your changes.
